XM Satellite Radio is a major improvement over standard radio, and I believe that that NAB's petition 04-160 is not supporting the consumer, but instead only supporting the money-hungry media conglomerates that are not listening to the customers. In the market which I live in (Dallas), there are few times that the radio is playing music worthwhile, they do not have any selection, and trying to get important information like traffic & weather takes 15-30 minutes of constant channel surfing. XM's instant traffic & weather should not go away, as it is something I pay for access to, and it is a valuable tool for people that must have instant access to this information.

I am urging that XM Satellite Radio be able to maintain its Instant Traffic & Weather service, and that you do not support the NAB's petition 04160.
